21st Century IT Skills

**Initial Prompt:**

Create a one-page personal portfolio site for a freelance graphic/UI designer to showcase projects and attract clients. Include the following pages for the portfolio website: Home, Portfolio, Services, About Me, Blog, Contact. Clean, lots of white space, monochrome base with one accent color (e.g., maximum green). Use bold typography, grid-based project layouts and subtle animations.

**Refinement Prompts:**

**[1]** Change top navigation to Home | Portfolio | Services | About Me | Blog | Contact. Highlight 'Work with Me' as a persistent button in the header.

**[2]** Change the personal description to "Hi, I'm Ivy. A designer based in PH. With over 4 years of experience in the digital design space, I specialize in creating interfaces that are not only visually striking but also deeply functional. My approach is rooted in minimalism and clear communication. I believe that good design should get out of the user's way while leaving a lasting, premium impression." Create a filterable portfolio gallery. Add a simple contact form with project brief fields (budget, timeline, type of work). Include social links (Facebook, Instagram, LinkedIn) in the footer.

**Website Link:** [https://design-hub--iiivvvyyy.replit.app](https://design-hub--iiivvvyyy.replit.app)

**Final Reflection:**

- What worked well?
  - Replit helped me quickly create a basic layout for my website. It was also helpful because I could easily see the output right away. It saved me time when making the structure and design.

- What needed manual fixing?
  - Some parts of the website needed editing, like spacing, alignment, and text. I also had to fix a few parts of the code to make it look better and more organized.

- What did you learn about prompting?
  - I learned that clear and specific prompts give better results. If the prompt is too general, the output is not as good. I also learned that I need to try a few times and improve my prompt to get the result I want.
